

## Organization of this Guide

I. Configuration Basic model and how it works Syntax - json, \_ %  
%%; defining values; declaring objects Included  
setupcoreservicesidauthlocal/grizzlyAWS/lambdamemory/dynamo  
bootstrap/cloud\_bootstraplocal config Configure Cloud  
Standup (the script uses this to invoke some version of deployer  
over cloudformation)cloud to connect to (AWS is the only  
current option)bucket to store CF instack namecomponents to  
deploy and how to connect to cloud resources, roles etc.custom  
domains to configureAlso obviously requires to be done as a  
specific user, but probably on the command line

II. AdminScripts - aws\_standup and zinikiincluding all the  
optionsflas integration--ziniki most obviously, but probably  
other things too.memory admin, dump etc.configuring domains  
into a serveradding OpenID & OAuth providerstracing can be  
done with cloudwatch but we should have some additional  
toolsin particular catching errors and notificationsbackups in  
cloud are assumed to be handled by cloud infrastructure  
(glacier, etc)Commerce Admin?Installing new services (not  
including FLAS)?Installing modules

III. APIsDataStoreContentStoreUploader... and more in  
timeCommerceAnalyticsMail

IV. More technical informationWorking with self-signed  
certificatesZiWSH/Websockets/Push NotificationsOpenID &  
OAuth integration
